1 Introduction

1.1 Purpose

This document defines the requirements for *Bite*, a multi-page static website built with HTML5 and a single external CSS file. It sets out what the site must do, how it must look and the criteria used to accept it. It also maps every requirement to the SE 310 brief and grading rubric, so nothing in the brief is missed.

1.2 Scope

Bite presents a photographic aesthetic built on raw, unpolished imagery: hard flash, film grain, fisheye lenses, desaturated film tones and subjects that feel feral or calm in the middle of chaos. Every image is paired with one short interpretive sentence.

In scope: four linked HTML pages, one stylesheet, local media (images and audio), a contact form, W3C validation, and cross-browser testing.

Out of scope: JavaScript, frameworks, back-end form processing, a CMS and hosting.

1.3 Definitions

Interpretation A single short sentence (12 words or fewer) that reads an image.

MUST The requirement is mandatory for acceptance.

SHOULD The requirement is strongly recommended but not mandatory.

COULD The requirement is a stretch goal.

2 Concept

2.1 Creative Direction

The site works like a printed photo zine: a dark canvas, heavy type and lots of empty space. The writing is short and declarative, and it never explains too much. The tone is confident, slightly menacing, and quiet.

2.2 Sample Interpretations

- Snarling dog under flash — *"Not angry. Honest."*
- Figure on fire carrying a briefcase — *"She's still going to the meeting."*
- Empty road, parked motorcycle — *"The road doesn't ask where you're going."*
- Pyramid with a lone figure — *"Some things were here before the question."*
- Fisheye portrait — *"Distortion is just closeness."*

2.3 Target Audience

Visitors interested in photography, visual culture and design, mainly on mobile and desktop browsers.

3 Design System

3.1 Colour Palette

All colours MUST be declared once as CSS custom properties on `:root`.

	Token	Hex	Use
	`--ink`	`#0E0E0C`	Page background
	`--bone`	`#E8E2D4`	Body text, borders
	`--accent`	`#E0451F`	Links, hover states, highlights
	`--muted`	`#6B675F`	Captions, metadata, footer
	`--panel`	`#1A1A17`	Table rows, form fields

3.2 Typography

Role	Typeface	Notes
Headings	Anton (or Bebas Neue)	Uppercase, tight letter-spacing
Interpretations	EB Garamond, italic	Larger size, generous line-height
Body / UI	System sans-serif stack	For readability and speed

3.3 Layout & Spacing

- A spacing scale based on a `0.5rem` unit (`--space-1` to `--space-6`).
- Maximum content width of `1200px`, centred.
- The gallery uses CSS `columns` for a masonry effect: 3 columns on desktop, 2 on tablet and 1 on mobile.
- A grain texture overlay applied with a `body::before` pseudo-element.

3.4 Imagery Treatment

Images appear at reduced saturation (`filter: saturate(0.6)`) and return to full colour on hover or focus, with a short CSS transition.

4 Site Map

Page	File	Content
Home	`index.html`	Hero image, manifesto lines, ordered list “How to look at it”
Gallery	`gallery.html`	Masonry grid of images, each with alt text and an interpretation
The Look	`look.html`	Technique table, ambient `<audio>` track, external links
Contact	`contact.html`	“Send us your interpretation” form

Directory structure:

```
bite/
|-- index.html
|-- gallery.html
|-- look.html
|-- contact.html
|-- css/style.css
|-- images/   (original or royalty-free photos only)
`-- media/    (audio file, e.g. ambient.mp3)
```

5 Functional Requirements

5.1 Structure & Text (Rubric: HTML Structure & Text Formatting)

ID	Priority	Requirement
FR-01	MUST	Every page uses `<header>`, `<nav>`, `<main>`, `<section>` and `<footer>`.
FR-02	MUST	Each page has exactly one `<h1>`. `<h2>` and `<h3>` follow a logical hierarchy.
FR-03	MUST	The site uses bold, italic, underline, varied colours and varied text sizes, applied with semantic tags (`<strong>`, `<em>`, `<u>`) and CSS.
FR-04	MUST	Code uses consistent 2-space indentation and includes comments marking each major section.
FR-05	MUST	Every page declares `<!DOCTYPE html>`, `lang="en"`, a UTF-8 charset and a unique `<title>`.

5.2 Elements, Media & Form (Rubric: HTML Elements, Media & Form)

ID	Priority	Requirement
FR-06	MUST	The site includes at least one `<ul>` (e.g. the navigation) and one `<ol>` (Home: "How to look at it").
FR-07	MUST	Internal links connect all four pages through the navigation bar.
FR-08	MUST	At least one external link uses `target="_blank"` and `rel="noopener noreferrer"`.
FR-09	MUST	Every `<img>` has descriptive `alt` text. Gallery images sit in `<figure>` with the interpretation in `<figcaption>`.
FR-10	MUST	The Look page has a table with a `<caption>`, a `<thead>` with `<th scope="col">`, and at least 4 rows. Columns: Technique, Effect, Feeling.
FR-11	MUST	A local audio file plays through `<audio controls>`, with fallback text. Embedded YouTube does not satisfy this requirement.
FR-12	MUST	The contact form has labelled fields for name, email and message, plus a submit button.
FR-13	MUST	Form fields use HTML5 validation: `required`, `type="email"` and `minlength` on the message.
FR-14	MUST	Every label is linked to its input via `for`/`id`.
FR-15	SHOULD	The form uses a `mailto:` action or a documented placeholder action, so submission is testable.
FR-16	MUST	No empty pages, dead links or placeholder `href="#"` values.

5.3 Visual Design (Rubric: CSS Design & Layout)

ID	Priority	Requirement
FR-17	MUST	All styling lives in a single external file, `css/style.css`, with no inline styles or `<style>` blocks.
FR-18	MUST	The colour scheme, fonts and spacing are identical across all pages and driven by custom properties.
FR-19	MUST	The navigation bar sits in the same position on every page and highlights the current page.
FR-20	MUST	The table is styled with borders, padding, a distinct header row and zebra striping.
FR-21	MUST	The form is styled with full-width fields, visible focus states and accent-coloured invalid states (`:user-invalid` or `:invalid`).
FR-22	MUST	The stylesheet styles colours, text, borders, box model properties and spacing.
FR-23	SHOULD	The stylesheet is organised into commented sections: Tokens, Base, Layout, Components, Pages, Media queries.
FR-24	COULD	Gallery images transition from desaturated to full colour on hover and focus.
FR-25	COULD	A grain overlay applied with a pseudo-element, which does not block pointer events.

6 Non-Functional Requirements

ID	Priority	Requirement
Responsiveness & Compatibility (Rubric: Cross-Browser Functionality)		
NFR-01	MUST	Every page includes `<meta name="viewport" content="width=device-width, initial-scale=1">`.
NFR-02	MUST	Layout adapts at breakpoints of 600px and 900px, with no horizontal scrolling at 360px width.
NFR-03	MUST	The site works on at least two browsers across two operating systems (e.g. Chrome on Windows 11 and Safari on iOS).
NFR-04	SHOULD	The site is also tested on Firefox and Edge.
Validation (Rubric: Validation & Compatibility Report)		
NFR-05	MUST	Every HTML file passes the W3C Markup Validator with 0 errors.
NFR-06	MUST	`style.css` passes the W3C CSS Validator with 0 errors.
NFR-07	SHOULD	No warnings remain. Any that do are justified in the report.
Accessibility		
NFR-08	MUST	Text contrast meets WCAG AA (4.5:1 for body text) against `--ink`.
NFR-09	MUST	All interactive elements are reachable by keyboard and show visible focus.
NFR-10	SHOULD	Animations and transitions respect `prefers-reduced-motion`.
NFR-11	COULD	The Lighthouse Accessibility score is 95 or higher on every page.
Performance & Content		

ID	Priority	Requirement
NFR-12	SHOULD	Images are compressed (WebP or JPEG, 300KB or less each) and use `loading="lazy"` below the fold.
NFR-13	MUST	All images and audio are original or royalty-free (Unsplash, Pexels, Pixabay), with credits in the footer.
NFR-14	MUST	The site uses no JavaScript and no CSS or JS frameworks.

7 Constraints & Assumptions

- HTML5 and CSS3 only, with one external stylesheet.
- Web fonts may load from Google Fonts. If they fail, the site falls back gracefully to system fonts.
- The site runs from local files, so no server is required.
- Deadline: 24/11/2026. Submission is a `.zip` of the site folder plus a PDF report.

8 Acceptance Criteria

The site is accepted when:

1. All **MUST** requirements are met and verified.
2. W3C validator screenshots show 0 errors for every HTML file and the CSS file.
3. Compatibility testing across at least two browsers on two operating systems shows no unresolved *Critical* or *Major* issues.
4. Every item on the brief's submission checklist is ticked.

9 Traceability Matrix

Rubric Criterion	CLO / Task	Requirements
HTML Structure & Text Formatting	CLO 3, Task 1	FR-01 – FR-05
HTML Elements, Media & Form	CLO 4, Task 1	FR-06 – FR-16
CSS Design & Layout	CLO 5, Tasks 1–2	FR-17 – FR-25
Cross-Browser Functionality	CLO 6, Task 2	NFR-01 – NFR-04
Validation & Compatibility Report	CLO 7, Tasks 3–5	NFR-05 – NFR-07, Section 8
